

The Providence Breast Centre (PBC) at Mount Saint Joseph Hospital (MSJ) is mainly dedicated to navigating the care of patients with breast cancer.

Access to PBC - two streams of intake into PBC

1. Through MSJ Radiology

Patients who have breast imaging at MSJ and go on to require breast BIOPSY will be referred by Radiology to PBC for follow up.

Referral form: http://www.msjbreastclinic.com/RABC_links_pro.html

- a. Referral to both MSJ Medical Imaging and PBC is not required.
- b. Patients with normal imaging, or imaging findings NOT requiring biopsy will be discharged from Radiology to the care of the referring provider.

2. Direct referrals

Patients that have completed diagnostic imaging in facilities outside of MSJ can be referred directly to the clinic.

- a. These patients REQUIRE complete work ups prior to be accepted into PBC.
- b. Referral request can be faxed to **604.877.8506**.
- c. Please provide imaging and pathology reports with the request for consultation.

We DO NOT provide consultation at Providence Breast Centre for:

- × Benign breast imaging with benign breast exam
- × Breast pain
- × Breast feeding related issues
- × Breast infection
- × Second opinion of imaging abnormalities

If your patient has been recommended to proceed with image guided biopsy by radiology, please organize the biopsy at the facility recommended by radiologist – we do not have the capacity to expedite biopsies at other facilities.

**If there is a concern, please contact the
Providence Breast Centre at 604-877-8511.**
